**SPC HYBRID FLOORING**

# CONSTRUCTZONE

# SPC HYBRID FLOORING

SPC Hybrid Flooring stands for stone plastic composite hybrid flooring. SPC Hybrid Flooring is an engineered flooring that combines limestone and stabilizers to create an extremely durable core. Constructzone SPC Hybrid Flooring is 100% waterproof and adds stability, dent resistance and structure to plank flooring.

# CONSTRUCTZONE SPC HYBRID FLOORING CONSTRUCTION

CONSTRUCTZONE'S 7MM SPC HYBRID  
HAS SEVERAL MAIN LAYERS.

## WEAR LAYER

The 0.5mm PE wear layer is the top coating on the floor that is transparent, and UV treated. This adds scratch and stain resistance to the plank.

## TOP COAT

SPC floor has a thin layer of vinyl attached to it. This layer is waterproof and contains the pattern, texture and look of the floor.

## SPC CORE

The SPC core is made by combining limestone powder and stabilizers to create a dimensionally stable and waterproof core. SPC core is 5mm in thickness.

## ATTACHED UNDERLAYMENT

Constructzone SPC Hybrid Flooring has a 1.5mm cork underlayment. The cork underlayment provides acoustic qualities for sound reduction. It also removes the need of a separate underlay and adds softness to the floor

UNICLIC® The traditional glueless locking technology.

# BENEFITS OF SPC HYBRID FLOORING

SPC Hybrid Flooring has become one of the most popular floors to install for a variety of reasons. Whether you're a homeowner, property manager or business owner, Constructzone SPC Hybrid Flooring offers a great flooring option for any application.

## WATERPROOF

It is 100% waterproof, which means it can be installed in kitchens, bathrooms, laundry rooms and various commercial applications. This is one of the biggest factors in choosing an SPC Hybrid floor.

## STABILITY IN TEMPERATURE FLUCTUATIONS

With the stone construction, an SPC core is more stable in environments with temperature changes, such as cabins, homes with AC units and homes with humidity fluctuations.

## SAFETY

Constructzone SPC Hybrid is fire rated and has a slip rating of R10, one of the highest in the category.

## APPEARANCE

Constructzone SPC Hybrid Flooring can have a variety of looks, textures and styles. It is difficult to identify the difference between real timber and SPC Hybrid flooring.

## SOUND

With the dense core, the planks have a quieter sound. You will not hear a hollow sound when you walk on it.

## COMFORT

The SPC Hybrid Flooring feels sturdier and more cushioned under foot than traditional due to the dense core and thickness of the plank. The thicker planks will give you more comfort. Constructzone SPC Hybrid planks have a cork underlay attached adding to the softness under foot.

## EASY MAINTENANCE & CLEANING

Constructzone SPC Hybrid Flooring is designed to be easily cleaned with regular sweeping and mopping.

## AFFORDABILITY

Constructzone SPC Hybrid Flooring is very budget friendly.

## INSTALLATION

Constructzone SPC Hybrid Flooring is a click-lock installation system. It is installed similarly to a regular engineered flooring installation. No glues, underlay or extra tools are required, and it can be installed directly onto any level surface.

## WARRANTY

20 Year Residential and 8 Years Commercial

Constructzone SPC Hybrid flooring is a highly rated material that is having a huge impact on the flooring market. A cushioned step, dent resistance and waterproof core makes this product perfect for homes, rental property's or businesses.
